

Zomato Analytics Dashboard

Analyzing restaurant performance, customer engagement, and pricing strategy

📄 **Tools Used:** Power BI | SQL | DAX

👤 **Presented by:** [MD TOUSIF RAZA]

Problem Statement

The food delivery industry is highly competitive, and understanding what drives customer satisfaction is critical.

□ This project aims to:

- Analyze restaurant performance across cities
- Identify key drivers of customer engagement
- Evaluate the impact of pricing and delivery services
- Generate actionable business recommendations

Data & Tools Used

Data Source

Zomato dataset containing restaurant details, ratings, pricing, and delivery information

Tools

- **SQL** – Data extraction and transformation
- **Power BI** – Dashboard development
- **DAX** – KPI calculations and measures

Key Metrics

 Total Restaurants

 Average Cost for Two

 Average Rating

 Delivery Share %

Data Preparation & Modeling

- Created structured datasets using SQL views:
 - City Analysis
 - Cuisine Analysis
 - Pricing Analysis
 - Delivery Analysis
- Cleaned and transformed data for consistency
- Built relationships and data model in Power BI
- Created calculated measures using DAX for KPI tracking

Dashboard Overview

The dashboard is divided into three sections:

Overview

- High-level metrics and performance indicators

Insights

- Deep analysis of customer behavior and trends

Recommendations

- Actionable strategies for business improvement

Purpose:

To provide a complete data-driven decision-making framework

Key Insights

Customer ratings are the strongest driver of engagement

Restaurants offering **delivery** show slightly higher ratings

Higher pricing does **not** significantly improve customer ratings

Certain cuisines consistently achieve higher customer satisfaction

Customer engagement increases significantly with higher ratings

Deep Analysis

- Cost vs Rating analysis shows minimal correlation
- High-rated restaurants receive significantly more votes
- Delivery-enabled restaurants tend to perform better
- Cuisine plays a major role in customer preference

Conclusion:

Customer satisfaction is driven more by quality and experience than pricing

Business Recommendations

Four priority actions to improve performance, visibility, and customer satisfaction.

Improve Customer Ratings

Focus on quality and service improvements

Expand Delivery Services

Increase accessibility and customer reach

Optimize Pricing Strategy

Focus on value rather than premium pricing

Promote High-Performing Cuisines

Highlight popular and highly rated cuisines

Business Impact

Increased customer engagement

Stronger interaction and deeper brand connection

Improved customer satisfaction and retention

Build loyalty through better experiences

Better pricing and delivery strategies

Optimize offers and service for stronger performance

Data-driven decision-making

Use insights to guide smarter growth decisions

This solution helps businesses identify key performance drivers and optimize operations.

Conclusion

This project demonstrates how data analytics can be used to:

Understand customer behavior

Reveal patterns in how customers interact and respond

Identify performance drivers

Pinpoint the factors that have the greatest impact

Generate actionable insights

Turn analysis into clear next steps and opportunities

Support strategic decision-making

Use evidence to guide smarter business choices

✓ **The dashboard provides a complete end-to-end analytics solution.**
